In Q1 to Q5, only one option is correct, Choose the correct option:

- 1. In which of the following you can say that the model is overfitting?
 - A) High R-squared value for train-set and High R-squared value for test-set.
 - B) Low R-squared value for train-set and High R-squared value for test-set.
 - C) High R-squared value for train-set and Low R-squared value for test-set.
 - D) None of the above
- 2. Which among the following is a disadvantage of decision trees?
 - A) Decision trees are prone to outliers.
 - B) Decision trees are highly prone to overfitting.
 - C) Decision trees are not easy to interpret
 - D) None of the above.
- 3. Which of the following is an ensemble technique?
 - A) SVM

B) Logistic Regression

C) Random Forest

- D) Decision tree
- 4. Suppose you are building a classification model for detection of a fatal disease where detection of the disease is most important. In this case which of the following metrics you would focus on?

A) Accuracy

B) Sensitivity

C) Precision

- D) None of the above.
- 5. The value of AUC (Area under Curve) value for ROC curve of model A is 0.70 and of model B is 0.85. Which of these two models is doing better job in classification?

A) Model A

B) Model B

C) both are performing equal

D) Data Insufficient

In Q6 to Q9, more than one options are correct, Choose all the correct options:

6. Which of the following are the regularization technique in Linear Regression??

A) Ridge

B) R-squared

C) MSE

D) Lasso

- 7. Which of the following is not an example of boosting technique?
 - A) Adaboost

B) Decision Tree

C) Random Forest

- D) Xgboost.
- 8. Which of the techniques are used for regularization of Decision Trees?

A) **Pruning**

B) L2 regularization

C) Restricting the max depth of the tree

- D) All of the above
- 9. Which of the following statements is true regarding the Adaboost technique?
 - A) We initialize the probabilities of the distribution as 1/n, where n is the number of data-points
 - B) A tree in the ensemble focuses more on the data points on which the previous tree was not performing well
 - C) It is example of bagging technique
 - D) None of the above

Q10 to Q15 are subjective answer type questions, Answer them briefly.

- 10. Explain how does the adjusted R-squared penalize the presence of unnecessary predictors in the model?
- 11. Differentiate between Ridge and Lasso Regression.
- 12. What is VIF? What is the suitable value of a VIF for a feature to be included in a regression modelling?
- 13. Why do we need to scale the data before feeding it to the train the model?

MACHINE LEARNING

- 14. What are the different metrics which are used to check the goodness of fit in linear regression?
- 15. From the following confusion matrix calculate sensitivity, specificity, precision, recall and accuracy.

Actual/Predicted	True	False
True	1000	50
False	250	1200
